DETAILED ACTION

1. In view of typographical error in the previous action, the examiner has decided to issue an other non-final office action to clearly state the reference used. However, the examiner disagrees with applicant's statement about the reference must teach or suggest the claims limitations (see In re Bozek, 163 USPQ 545(CCPA) 169).

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bibblani et al (US patent 5,639,153).

For claim 1, 9-14, Bibblani's device discloses a signal lens at 28' having a light source at , 12, 14', a reflective surface at 24, plurality of light transmitting elements transmitted to the light pipe arranged adjacent and parallel to each other to form substantially a planar layer at the end surface; the light transmitting elements formed a bundle at 14, 14'. However, Bibblani's's device fails to explicitly disclose the light source between the reflective surface and the planar layer. It would have been obvious to one having ordinary in the art at the time the invention was made to move the light source and place it between the reflective surface and the planar layer, since it has

been held that rearranging part of an invention of a device involves only routine skill in the art. In re Japikse, 86 USPQ 70.

For claim 2, 10, 15, Bibblani's device discloses the aforementioned limitations except that the angle range of values is not explicitly disclosed. It would have been obvious to one having ordinary in the art at the time the invention was made to choose the angle at a range of 0 to 45 degrees, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

For claims 3-5, Bibblani's device discloses the aforementioned limitations including the alignment of the light sources (see fig. 6) with the transmitting elements and they are co-planar and adjacent to the light transmitting element.

For claims 7-8, Bibblani's device discloses the aforementioned limitations including the fiber optic strand 14, and the lens 28 and 28' with plurality of light transmitting elements.

Conclusion

3. Claims 16-18 are allowed.
4. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
